

A Program Guide to Total Green Cleaning

Integrated Solutions by Diversey

Creating A Cleaner, Healthier & Sustainable Education Environment

A Green Cleaning Program can help reduce harmful exposure to indoor air pollutants, help students stay healthy, preserve the environment, and provide cost savings. Children are more heavily exposed to environmental toxins than adults. Inhalation and exposure to chemicals have been associated with reproductive and developmental toxicity, asthma and allergies.

- Indoor air is **2 to 5 times** more polluted than outdoor air
- Children exposed to total VOCs of more than 60 micrograms per cubic meter were **4 times** more likely to have asthma than those exposed to lower levels of VOCs
- Poor Indoor Air Quality is closely correlated to absenteeism
- Asthma accounts for **12.8 million** missed school days each year

The growing concern parents have for their children's wellbeing is resulting in a greater demand for safer and healthier school environments. In addition, state governments are focusing on the topic of green cleaning and as a result, more green cleaning guideline policies have been put into place. These trends are influencing purchasing decisions. Certified green products and meeting environmental goals are ranked as very important purchasing factors.

Safety

Sustainability

Cost Savings

Healthcare

The goal of Diversey's Integrated Green Cleaning Solutions is to provide a holistic approach that protects the environment and the health of students, faculty and visitors. A combination of green certified products and microfiber technology, cleaning procedures, and training resources help to reduce negative impacts on the environment.

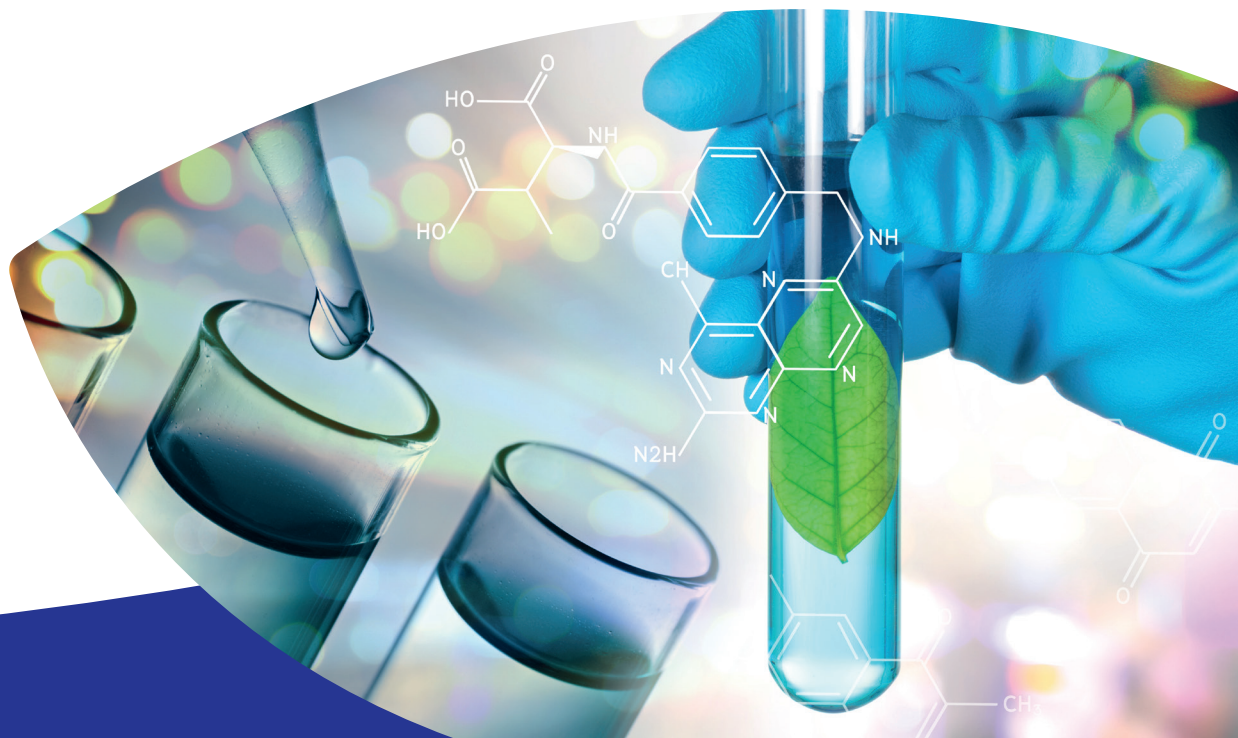

What to Watch?

Watch Out For Misleading & False Claims

- A claim that can come across too broad and can be misinterpreted by the customer
- A claim that gives the impression of sustainability but has no proof, or is simply a lie
- A claim that is not supported by a reliable third-party certification.
- A claim suggesting 'green' that is based on constricted attributes and does not recognize the important environmental issues
- A claim that diverts the customer from the greater environmental impact as a whole
- A claim that is unimportant and unhelpful to customers seeking sustainable, green products

Science-Based Testing

Diversey's products are trusted with superior results and backed by third party environmental organizations who complete rigorous testing to validate sustainability of products. There are a wide variety of standards that measure and validate performance, environmental health and sustainability.

How do you know?

Just look for certification logos. Third-party certifications from ECOLOGO®, Environmental Claim Validation, GREENGUARD®, Green Seal® and (USDA) BioPreferred® programs are based on rigorous sustainability and indoor air quality standards.

ECOLOGO certified products are another certification that helps to reduce environmental impact. It is credible to multi-attribute, life cycle-based standards to improve packaging, ingredient life cycle, product performance, pH level, package biodegradability, and efficacy.

Environmental Claim Validation is a single-attribute environmental claim credibility. TASKI Floor Scrubbers with Intelliflow saves an average of 76% cleaning solution per year compared to without Intelliflow.

GREENGUARD is certified for low chemical emissions, improving the quality of the air.

GREENGUARD GOLD is a standard that includes health based criteria for additional chemicals and also requires lower total VOC emissions to ensure that products are acceptable for use in environments, such as schools and healthcare facilities.

Green Seal requires products to be sold in concentrated form, prohibiting harmful chemicals, specifying sustainable packaging and limiting VOC content. Green Seal certifies services as well that include water, waste, and energy savings.

USDA BioPreferred are products that are derived from plants, other renewable agricultural, marine, and forestry materials.

Solutions Designed With You In Mind

Healthy High Performance Cleaning Program & Sustainable Solutions

Diversey's Healthy High Performance Cleaning Program (HHPC) includes GREENGUARD GOLD certified products and microfiber technology, and best practice cleaning procedures that create sustainable outcomes and effective results. GREENGUARD GOLD Certification is a stricter certification criteria that takes children and school environments into account, which considers safety factors. Diversey's complete green cleaning program help meet LEED building operation requirements.

1. Certification

Diversey's HHPC Program is certified for Indoor Air Quality by Greenguard Environmental Institute (GEI)

2. Tools

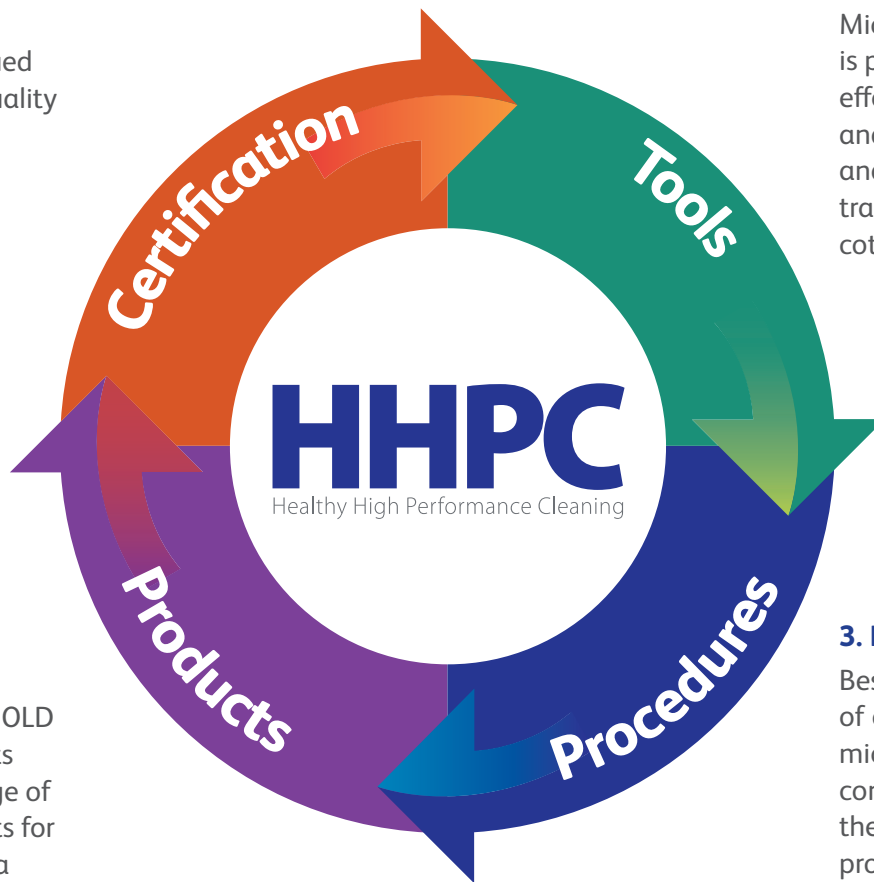

Microfiber technology is proven to be more effective in picking up and retaining more dust and dirt particles than traditional paper or cotton products

3. Procedures

Best practices of cleaning with microfiber technology combined with the certified green products increase the effectiveness of a holistic Green Cleaning Program

4. Products

Diversey's GREENGUARD GOLD Certified products offer a wide range of cleaning products for every school area

Green Products

Products listed are included in Diversey's sustainable offering. Diversey's HHPC (Healthy High Performance Cleaning) program is the first cleaning system certified for Indoor Air Quality. Chemicals with the HHPC mark have been certified GREENGUARD® GOLD and are included in the HHPC system.
